

Attack Path Assessment

Uncover, Understand, and Eliminate Attack Paths

Proactively uncover Active Directory and Entra ID attack paths, analyze choke points, and understand specific and detailed remediation plans with the power of BloodHound Enterprise.

Why SpecterOps

SpecterOps is the industry leader in Attack Path Management. Our Attack Path Assessments, led by industry experts in offensive security, empower you to identify, uncover, understand, and eliminate attack paths with the power of BloodHound Enterprise.

Why Now

Your organization just completed its annual penetration test. The team abused an attack path in Active Directory or Entra ID, but you keep asking yourself, "Could there be more?" **Get the full picture of the attack paths in your environment, not just the one(s) found in your penetration test.** Then eliminate those attack paths with confidence and clarity.

Benefits

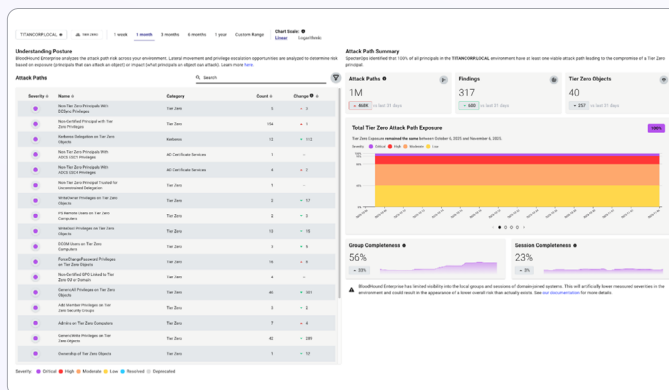

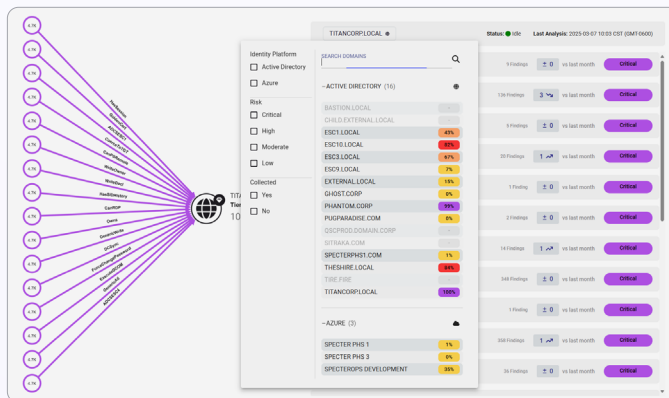

- ✓ Find and eliminate abusable configurations across Active Directory and Entra ID
- ✓ Identify optimal remediation guidance through risk-based Choke Point analysis
- ✓ Understand the risk to your Tier Zero and Privileged Access identities and resources
- ✓ Uncover real attack paths caused by years of technical debt and misconfigurations
- ✓ See how an adversary sees your network

A SpecterOps Attack Path Assessment will bring awareness to abusible configurations that allow an attacker to take over your network. Our assessment will visualize all Active Directory and Entra ID attack paths and provide specific changes to make on your environment to eliminate potentially millions of attack paths that exist in your network.

Our Attack Path Assessment puts you back in control of your Active Directory and Entra ID by eliminating the adversary's favorite target for lateral movement and privilege escalation. Attack paths are chains of abusible privileges and user behaviors creating direct and indirect connections between users and assets. **You cannot patch these misconfigurations, as they are not vulnerabilities.** Years pass, teams change, complexity increases, and attack paths explode in number. This is the fundamental problem behind most ransomware and breach events today.

This service, powered by BloodHound Enterprise, comprehensively maps Active Directory and Entra ID attack paths and identifies remediation choke points to remove millions of paths with the simple and safe changes to your network. Each attack path is prioritized by impact to the organization and accompanied with step-by-step remediation guidance. **Let us show you how an adversary sees your environment and how to take back control.**

Real Results

- **Expert staffing:** Experienced operators, often those who discovered the attack paths will find and educate your staff about the risk of each type of attack path.
- **Understand the full picture:** Understand how permissions and configurations can be abused by adversaries to gain access to your critical assets.
- **Eliminate millions of attack paths:** Simple, safe, and precise changes to your network will eliminate critical adversary choke points.
