

# Maturity Assessments

## Evaluate Security Operations Program Capabilities

Move beyond relying on the competence of a few—start consistently achieving your strategic objectives.

### Why SpecterOps

SpecterOps tests and validates hundreds of clients and their capabilities to detect and respond to our most advanced tradecraft. Across all of these organizations, there are several key common themes that we have observed. We incorporate all of these best practices into designing and executing a plan to gain confidence in your capability’s execution and continued growth.

Program development usually involves a combination of growing your team member’s capabilities, ensuring you have efficient processes, and have the technology to support your goals. **Where gaps exist, we can help design, educate, and build a holistic capability to exceed your expectations.** SpecterOps also has a vast partner network that we can leverage to ensure you are getting the best of breed solutions for your toughest challenges.

### Benefits

- ✓ **Expertise:** SpecterOps has a proven track record building and training security teams for high-level organizations. Our experience allows us to effectively assess your program
- ✓ **Independent Perspective:** Outside assessments can be invaluable in identifying blind spots you might miss with internal evaluations
- ✓ **Establish a Baseline:** Benchmark your current security posture, which is crucial for tracking progress over time
- ✓ **Create a Roadmap:** Know how the capability should mature in the next 6 months and for years afterwards

## Why Now

Do you want to understand the current state of your detection and response program?

A SpecterOps Maturity Assessment will benchmark your current state and identify where to go from there.

## We Build Best In-Class Security Operations

We will provide a thorough and impartial evaluation of your security operations program. Gaining a realistic understanding of the maturity of your security operations program capabilities is a challenging problem. We have unique expertise in building offensive and defensive security teams based on our roots leading U.S. Department of Defense teams, building internal capabilities for Fortune 500 corporations, and the focus on training as a core component of our services. We bring experience from developing dozens of teams, both in what makes effective capabilities and lessons learned along the way.

**SpecterOps provides a third-party, expert perspective of where the organization currently sits, with clear observations of deficiencies and recommendations for correcting shortfalls.** We evaluate capabilities to meet strategic objectives, repeatably perform desired activities with organizational competence level, not just surviving based on the individual competence of a few key hard-working individuals.

Our assessment approach helps establish a baseline understanding of the current program, prioritize issues, and map out a plan for addressing competency gaps. A maturity assessment is intended to evaluate the current state of the capabilities of an information security business unit, or of some subset of that business unit.

**SpecterOps applies the conceptual model of the Funnel of Fidelity to identify deficiencies in people, process, and technology across Collection, Triage, Detection, Investigation, and Remediation functions.** At the end of the assessment, SpecterOps delivers a long-form findings report covering identified deficiencies and a series of recommendations to improve your capabilities. This report will describe the status quo of security operations and allow you to identify functions that could benefit from additional resourcing and/or focused development.

### Real Results

- **Evaluate capability maturity:** Identify gaps in current program capabilities across people, process, and technology.
- **Targeted interviews:** Independent interviews ranging from your most senior to newest members of the team to deeply understand how your organization operates.
- **Meet strategic objectives:** Ensure you have a concrete plan to build your defensive program maturity and achieve your expected outcomes.
- **Continuous improvement:** Understand how to create a feedback loop that allows your security operations program effectiveness to grow organically over time.
